EDUCATION

University of California, Irvine

Bachelor of Science in Computer Science, GPA: 3.80

Irvine, CA

Expected Dec 2028

WORK EXPERIENCE

Software Developer Intern

Naval Air Warfare Center Weapons Division (NAWCWD)

Jun 2026 – Present

Point Mugu, CA

- Engineered a WPF GUI (MVVM, C#/XML) to transmit positioning and tasking data to a radar system on San Nicolas Island, applying unit testing across the full SDLC to ensure reliable deployment to live hardware
- Gained hands-on exposure to radar tasking and command protocols, including detection, tracking, and handoff of high-altitude objects

EXPERIENCE

Infrastructure Lead

Cyber @ UCI Infrastructure Team

Oct 2025 – Present

Irvine, CA

- Decommissioned servers and reorganized network topology for clearer operational visibility
- Leading and designing UI/UX workflows in **Figma** for internal tooling (Docker, Kubernetes, CI/CD), such as an internal VM provisioning tool that abstracts complex infrastructure workflows for club members
- Deployed Proxmox VE high-availability clustering and load balancing, improving VM failover reliability by 80% and eliminating single points of failure across the cluster
- Implemented **SSO integration, Infrastructure as Code (IaC) tools, and CCNA networking concepts** within a production environment

Full-Stack Developer

Commit the Change

Oct 2025 – Present

Irvine, CA

- Programmed a full-stack application using **React, Express.js, PostgreSQL, and Chakra UI**, enabling scalable data management and real-time program oversight for a global NPO operating in 5 continents.
- Deployed **RESTful APIs in Express.js** with **full CRUD functionality** and Promise-based concurrent data fetching, streamlining frontend-backend data flow and improving platform performance by 25%
- Collaborated in Agile sprints with pair programming and direct client feedback to ship features against a 2-week deadline

Software Developer

Blockchain @ UCI Smart Contract Team

Apr 2026 – Present

Irvine, CA

- Engineered an AI-powered exploit generation engine using OpenAI APIs and Anvil local chain, delivering binary proof-of-concept attacks on live contract state rather than theoretical vulnerability reports
- Built a Python Slither static analysis module detecting reentrancy, access control, and logic flaws, structuring findings as JSON to feed a downstream LangGraph agent pipeline
- Containerized the platform with Docker and designed a shared Postgres/pgvector database architecture, enabling consistent multi-developer access to run state and grounding data

PROJECTS

Network Engineer – Personal Networking Project | Cisco Packet Tracer

- Simulated a two-site, tier-three enterprise network with **RIP, OSPF, EIGRP, VLANs, DHCP/DNS, SSH, and dual-stack IPv4/IPv6 subnetting**
- Administered routers, switches, and Layer 3 switches through the Cisco CLI, troubleshooting routing issues

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, C#, HTML, CSS, XML

Frameworks/Libraries: React, Express.js, PostgreSQL, MVVM, Chakra UI, Tailwind CSS

Tools: Docker, Kubernetes, Proxmox, IaC, GitLab CI/CD, Linux, Figma, Firebase, Unity, Microsoft Office 365

Certifications: Cisco Certified Network Associate (CCNA), Girls Who Code: Data Science for Good
